Modified Wood: Natural Beauty, Enhanced Performance

Modified wood is natural wood refined through thermal or chemical modification to transform its performance, durability, and stability. By altering the wood's cellular structure through processes such as heat treatment, pressure, or bio-based modification, modified wood can offer increased resistance to moisture, decay, insects, and weathering while maintaining the natural beauty of real wood. The result is a high-performance material that combines the warmth and character of natural wood with enhanced durability and dimensional stability. At TimberTown, we offer a range of premium modified wood products, including Accoya®, Kebony®, Thermory®, DassoXTR®, and Rainier Plank®. These materials provide durable, design-forward solutions for decking, siding, soffits, cladding, and other exterior applications.

accoya

ACCOYA

Order with PRO COAT Install Ready

Accoya is wood, but not as you know it. Made from sustainably sourced Radiata Pine, Accoya is modified through a patented process called acetylation, sometimes described as “pickling” wood. Similar to how pickling preserves food, the wood is treated with acetic anhydride, a concentrated vinegar derivative, to permanently modify its cellular structure. The result is wood that resists rot, withstands the elements, and stays strong for decades. Guaranteed for 50 years above ground and 25 years in ground or freshwater, Accoya offers remarkable performance and longevity for demanding exterior applications.

THERMORY
LEAVE A LASTING IMPACT

THERMORY

Order with PRO COAT Install Ready

Thermory is the union of science and design, combining natural beauty with enhanced performance. Using a carefully controlled process of heat and steam inside specialized, computer-monitored kilns, Thermory alters the wood on a molecular level without adding chemicals. The result is wood with exceptional rot resistance, dimensional stability, longevity, and rich, beautiful color. Thermory's Ash, Pine, and Spruce collections originate from their respective species, with multiple collections, profiles, finishes, and color options to suit a variety of exterior applications. Select products are also available with Class A fire performance through SaferWood, providing an ignition-resistant option for exterior and WUI applications.

kebony

KEBONY

Order with PRO COAT Install Ready

Kebony is an alternative to exotic hardwoods when beauty, performance, and sustainability are essential. Using a proprietary process of pressure, vacuum, and heat, Kebony permanently bonds a bio-based liquid within the wood's cell structure. This process strengthens the wood's durability, stability, and resistance to the elements. Kebony Clear originates from sustainably sourced Radiata Pine, while Kebony Character is made from Scots Pine, each offering a distinct appearance and character. Both provide the natural beauty and warmth of wood with exceptional durability and environmental responsibility, making them ideal for terraces, decks, façades, and other exterior applications.

RAINIER
PLANK

RAINIER PLANK

Order with PRO COAT Install Ready

Rainier Plank offers engineered wood siding and paneling designed for exterior applications. Their product line features Clear Vertical Grain Douglas Fir and Western Red Cedar in fineline and micro-V profiles. Their veneering process has been widely proven in the millwork industry for years. By using an exterior-grade adhesive designed to withstand even the most extreme weather, they have created a product that is durable, beautiful, economical, and sustainably sourced.

ACRE
MODERN·MILL

ACRE

Order with PRO COAT Install Ready

ACRE is a tree-free, sustainable alternative to traditional wood, crafted from upcycled rice hulls. With the look and feel of natural wood, ACRE combines durability with resistance to moisture, pests, and weathering. Lightweight yet strong, ACRE can be cut, nailed, and screwed using standard tools. It is also suitable for CNC machining and thermoforming. Its versatility makes it well suited for decking, siding, millwork, and other exterior applications where durability and low maintenance are essential.

dassoXTR
Fused Bamboo® for Exterior Use

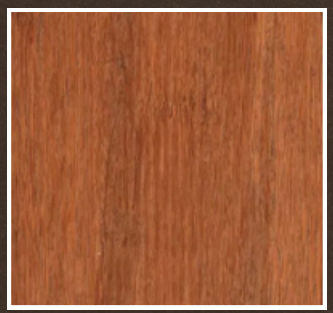

DASSO XTR

DassoXTR is a high-performance bamboo product designed specifically for outdoor applications. It is made using dasso's patented Fused Bamboo® process, which combines 87% natural bamboo fibers with 13% resin. The bamboo strands are crushed, treated, infused with resin, and compressed under high pressure to create an exceptionally dense and stable material. This process helps make DassoXTR resistant to bacteria, fungus, mold, and insects while providing the performance needed for exterior applications. DassoXTR can be used for decking, siding, and porch flooring, offering a distinctive, high-performance alternative to traditional wood products.

CUSTOM MILLING

One of the advantages of working with TimberTown is our custom milling capability. We offer custom milling for our hardwood, softwood, and modified wood product lines. From floors and walls to ceilings, we can create the right milling profile for your project. If you don't see the exact profile you want, contact us or visit one of our locations. We have access to hundreds of profiles and can help you find the right option. With more than 400,000 square feet of manufacturing space and equipment, we deliver precision, efficiency, and reliable quality.

PROCOATING®

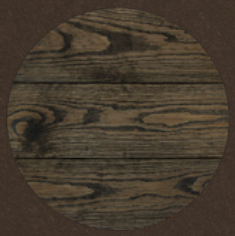

ProCoating is TimberTown's professional wood coating service, providing a complete solution from material selection and custom milling to finishing and jobsite delivery. Our team helps you select the right species, profile, coating, color, sheen and texture for your application. Every board is coated on all six sides in a controlled environment for consistent coverage, then delivered directly to the jobsite ready for installation.

ProCoating offers both solvent-based and water-based coatings to suit different applications. Solvent-based coatings penetrate deeper and provide greater resistance to wear and scratching, making them ideal for decking, walkways and high-traffic areas. Water-based coatings sit closer to the surface and are a practical choice for siding, soffits, ceilings and covered spaces.

The ProCoating Process

01 — SELECT YOUR SUBSTRATE
Choose from premium hardwoods, softwoods and modified woods selected for your application.

02 — PICK YOUR PROFILE
Select a standard profile or work with our team to create custom-milled decking, siding, soffit or architectural components.

03 — FIND YOUR FINISH
Choose the color, sheen and texture that complement the wood and achieve your design intent.

04 — INSTALL TO IMPRESS
Every board is coated, all six sides, in a controlled environment for consistent coverage, then delivered directly to the jobsite ready for installation.

SPECIALTY BUILDING PRODUCTS

Quality Materials
We are meticulous and exacting in our selection of products. We choose to buy the best softwoods, composite decking, long-lasting hardwoods like Ipe, and an incredible selection of modified woods.

Superb Service
We put people first.
Clients, vendors, and suppliers are most important to us. We pride ourselves on clear communication, responsive service, and on-time delivery.

Friendly People
Why do we enjoy coming to work with a smile on our face? Because we love helping people like you! Once you contact us or walk into our showroom, our goal is to help you find what you are looking for.
